

PLANTPACK®

MOULD PREVENTION & GAS CARE

Instructions for Mould Prevention and Gas Care:

By receiving these instructions, your customer requires to add Plantpack to your product so the goods will be securely protected against mildew. We are pleased to give you a short introduction.

Plantpack is a kind of desiccant. It is the first product, which is made out of plants, so it is 100% natural and toxic free. By using Plantpack you are helping to save the environment. Besides absorbing moisture, Plantpack is also absorbing the gasses Toluene and Benzene. These gasses are extremely dangerous against high concentration and therefore strictly forbidden. Because of this additional absorption it will help to maintain the container under the accessible level. The risk that the container needs to be put a side to be freshened upon arrival at customer's harbor, is very small.

Plantpack products:

The kind of your product determines how many Plantpacks need to be added during production. It is our pleasure to assist you. We have the following products in our assortment:

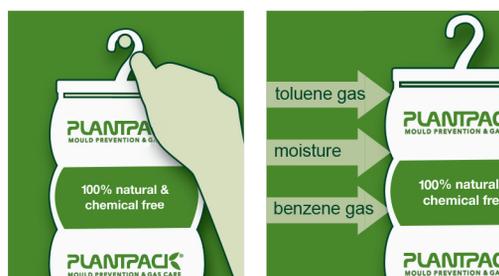

Bag PB25:

We supply a small bag (5cm x 5cm) which can be easily added to your product during production. For example Plantpack can be added to the shoe box of your footwear, polybag of your mattresses, container of your medicines, etc. The bag can be used for Polybag and Box packed goods.

Tube PT68:

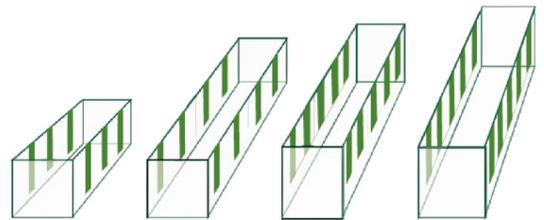

For absorbing the gasses Benzene and Toluene, and additional moist absorption inside the container we have Plantpack tubes in our assortment.

Amount of tubes needed in containers

On container base the following quantities of tubes are needed based on 10% empty space:

- 20' container : 6 tubes
- 40' container : 8 tubes
- 40' HQ container : 10 tubes
- 45' container : 10 tubes

NEEDED AMOUNT PLANTPACK TUBES IN CONTAINERS BY 10% EMPTY SPACE

Each tube can be simply hung in the container. The best effect is obtained to proportionate the tubes by dividing over the entire length.
